## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 5-20 allowed.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Yokouchi et al. (5,973,339) in view of Davids et al. (6,813,431).

Regarding Claims 1-3, Yokouchi et al. disclose a semiconductor photodetector having an optical attenuator where in Fig. 2, layer 30 is InP substrate, layer 11 is optical absorption layer and layer 21 is attenuator layer. Incident light 40 is attenuated by the left half attenuation section 20 and passed onto right half photosensitive section. Yokouchi et al. fail to disclose the required relationship between the attenuating layer and the detecting layer and the required PIN/APD diode. However, Davids et al. disclose an integrated photodevice and waveguide where in Fig. 6A, attenuation layer 18 is between detecting layer 12 and waveguide 28. Furthermore, as shown in 12c element 104 and in claims 5, 12 and 19, the detection layer is PIN diode.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required PIN diode detection layer in Yokouchi et

al. as taught by Davids et al. in order to have an attenuator structure with increased performance.

Please note that examiner considers that last part of the last paragraph of claim 1 to be "product by process" claim. Therefore the part "optical signal passes through the substrate and the attenuating layer before being received by the detection layer" is not given any patentable weight.

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
